|                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description:</b>                          | Unaesthetics spot or nevus or lesion in zones of easy trauma (for example on shaving region). Unaesthetic freckles. Other unaesthetics lesions in face or neck.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Is it an emergency?</b>                   | No, but one must know that a lesion localised in a frequent trauma's region can turn in malignancy or if a lesion presents progressive growth.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Test to be done :</b>                     | Lesion's visualization and skyn's characteristics analysis, determine the utility of the surgery.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Procedure done in office:</b>             | <b>Cosmetic surgery with radiofrequency</b> , under local anaesthesia. This procedure consists of exeresis of the lesion or lesions chosen without leaving scar, in most cases. The reason why scar does not stay is thanks to the use of radio frequencies, since the local trauma in the site of the surgery is minimal, bleeding minimal, and a limited postprocedure inflammation.<br>The previous evaluation of the type of skin, allows knowing the scaring characteristics of every person. The cost of the different surgery depends of the lesion' size and the presence of more than one lesion in the same surgical field. Some examples of prices, below. |
| <b>Procedure done in the operating room:</b> | Only in case of extensive injuries that need skin graft.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

**INT'L PRICES \***

| <b>Procedure</b>                                                                         | <b>Prices in US Dollars *</b> |
|------------------------------------------------------------------------------------------|-------------------------------|
| <b>Cosmetic surgery with radiofrequency 1 lesion inferior to 1.4 cm (code 362)</b>       | \$ 343                        |
| <b>Cosmetic surgery with radiofrequency 3 lesions inferior to 1.4 cm (code 332 )</b>     | \$ 686                        |
| <b>Cosmetic surgery with radiofrequency 6 a 10 lesions inferior to 1.4 cm (code 363)</b> | \$ 1 782                      |

\* Any procedure will be preceded by a Medical Consultation (cost of \$200) in order to confirm the diagnosis and to offer the best therapeutic option. The surgery fees do not include expenses of anaesthesia, room surgery fees or medicines in case of utilization of the operating room. The prices indicated are subject to change without notice.
