NOSE RINITIS

Description:	Exit of abundant secretions from the nostrils accompanied of sneezes, nose's itching and stuffy nose's sensation.
Is it an emergency?	No, nevertheless, an opportune consultation is recommended to avoid a complication as the chronic sinusitis.
Test to be done :	The diagnosis is confirmed by the direct examination of the nose, or with the help of the Diagnosis Sinusoscopy . The acoustic Rhinometry measures the exact percentage of nasal obstruction (mechanical obstruction).
Procedure done in office:	Hydro pulse Irrigation intranasal, This procedure consists of nostrils and the paranasals's irrigation with specialized equipment that sends a liquid jet in pulsatile way. Established protocol. It needs several sessions. It is possible to continue at home. Other treatments are indicated according to each case. Symptom's control > 90 %. Bilateral Radiofrequency Turbinoplasty under local anesthesia, consists of diminishing the turbinate's size that have been found enlarged and that cause the obstruction.
Procedure done in the operating room:	Only in cases in which an important mechanical obstruction is found. Radiofrequency Bilateral Turbinoplasty under general anesthesia or Radiofrequency's Septoplasty .
