NOSE SINUSITIS

Description:	Presence of abundant yellow, greenish or liquid secretions coming from the nostrils, accompanied or not by a face's pain.
Is it an emergency?	No, nevertheless, an opportune consultation could avoid a surgery. Rapid evaluation can be needed if symptoms of fever and alteration of the general condition's accompanied.
Test to be done :	The diagnosis is confirmed by the direct examination of the nostrils and with Sinusoscopy's help, that allows discover the origin of the nasal drainage and the anatomical condition of sinus openings. A complete Sinus Tomography is necessary before any surgery.
Procedure done in office:	Hydro pulse intranasal irrigation or Hydro pulse intranasal irrigation with antibiotherapy. This procedure consists of irrigating the nostrils and the sinus openings with specialized equipment that sends a liquid jet in a pulsatile way. Protocol treatment. It needs several sessions. The patient can continue the treatment at home. It's curative in more than 80 % of the patients. Other medical treatments are available, depending of the accompanied pathology (Rhinitis or nasal Polyps).
Procedure done in the operating room:	Nasosinus polyps's exeresis. FESS Functional Endoscopy Sinus Surgery.
