SUSPICION OF DEAFNESS IN NEWBORN CHILD

Description:	Newborn child who answers little to the sounds of the environment.
Is it an emergency?	Yes, since it becomes necessary to know if it is a question of a congenital Deafness or not. In case of deafness it is necessary to initiate an auditory rapid rehabilitation to avoid a permanent deafness in the child.
Test to be done :	The diagnosis is confirmed by the medical examination during the Consultation, including the analysis and exhaustive examination of the ear. Test of analysis of the middle ear and Acoustic Otoemissions are obligatory test in all the Newborn children in the United States.
Procedure done in office:	Instrumental ear's aspiration. In the presence of secretions into the external ear canal.
Procedure done in the operating room:	Only in selected cases and depending on the diagnoses confirmation.
