DRAINAGE EAR

Description:	Exit of any type of material from the ear's inside to outside, liquid, clear, blood, etc.
Is it an emergency?	No, but the patient must consult as promptly as possible, since a perforation of the eardrum can appear.
Test to be done :	The diagnosis is confirmed by the direct examination of the ear or by the way of the ear endoscopy.
Procedure done in office:	Instrumental ear's aspiration. This procedure consists of the evacuation of the content of the auditory external canal with ear video endoscopy system and to find the exact location at the origin of the drainage. It is practised with or without local anaesthesia according to the age and patient collaboration. It can be necessary to do more than one session of Instrumental aspiration and / or antibiotic's drop instill.
Procedure done in the operating room:	Only in case of inability to practise it with local anaesthesia or in case of non collaboration of the patient.
