The difference in Otorhinolaryngology
VERTIGO

Description:	Erroneous sensation of body's displacement or the visualized objects. Sensation of drunkenness, walking instability with the head's movements. Other auditory or neurological symptoms can accompany it.
Is it an emergency?	Yes, since the risk of fall exists, and it gives a handicap in the daily's life.
Test to be done :	The diagnosis is confirms during the examination of the spinal's function, ocular function and neurotology exams with the Videonystagmoscopy's help, during the Consultation; allowing to know if the origin of the dizziness is the ear (80 % of cases) or not. A battery of examinations is available according to the diagnostic suspicion (Menière's Disease, etc.). Emphasis in detection of positional component (high percentage of patients).
Procedure done in office:	**Vestibular caloric test, Acoustic Otoemissions, Baropodometry platforms, Vestibular Vibrator, Reposition manoeuvres in the multi-axial patient positioning device (**detect, diagnose, differentiate, treat and manage vertigo patients). This is the last French technology, the only one existing device in Latin America, used in all the cases in which positional component is verified. Curative treatment.
Procedure done in the operating room:	Only in selected cases and depending on the diagnoses confirmation.
